

“Where did my project go wrong?”

Have you found yourself asking this question in the face of a challenged or failing project? Often, the answer can be traced back to a poor decision, an untimely decision, or the absence of a decision somewhere in the course of the project. If you're ready to get your next project on the path to success, *The Project Manager's Guide to Making Successful Decisions* will show you how.

This practical guide helps project managers and their teams become better decision-makers by focusing on the key issues associated with decision-making. You will learn how to frame the decision, gather information, close the decision, get approval within the organization, and start implementing.

- ▶ Understand how successful decision-making contributes to project success
- ▶ Learn how to make the decisions required for successful management of complex, large-scale projects
- ▶ Discover techniques that facilitate the decision-making process
- ▶ Understand decision analysis as it relates to project management

You'll also benefit from real-world decision-making vignettes and case studies that demonstrate how a project manager's decisions are instrumental in a project's success.

COL Robert A. Powell, PhD, was Academy Professor and Deputy Department Head of the Department of Systems Engineering at the U.S. Military Academy at West Point. He received a PhD in systems engineering from Stevens Institute of Technology, an MS in operations research from George Mason University, and a BS in industrial engineering from Texas A&M.

Dennis M. Buede, PhD, is president of Innovative Decisions, Inc. He was formerly a professor at Stevens Institute of Technology and George Mason University. He has a PhD and an MS in engineering-economic systems from Stanford University. Dr. Buede has written two other books on decision-making: *The Engineering Design of Systems* and *Decision Synthesis: The Principles and Practice of Decision Analysis*.
